	Greater than 10% of Target

Use of Physical Restraints: This indicator shows the percentage of long-term care home residents in Ontario who were physically restrained every day in the seven days prior to being assessed by a health care professional. A lower percentage is better. The provincial benchmark is 3%. Restraints, such as chairs, trunk or limb restraints, can protect residents from harming themselves or others. However, physical restraints may cause agitation and confusion and increase the risk of pressure ulcers or injury.

2020/21 Provincial Average: 2.8 HW: 6.4 HC: 2.8

LTC Residents who Fell: This indicator shows the percentage of long-term care home residents in Ontario who fell during a 30-day period before an assessment by a health care professional. A lower percentage is better. The provincial benchmark is 9%. Falls among long-term care home residents are a common cause of injuries such as hip fractures, and may result in a visit to the emergency department or hospital admission.

2020/21 Provincial Average: 16.7 HW: 23.3 HC: 11

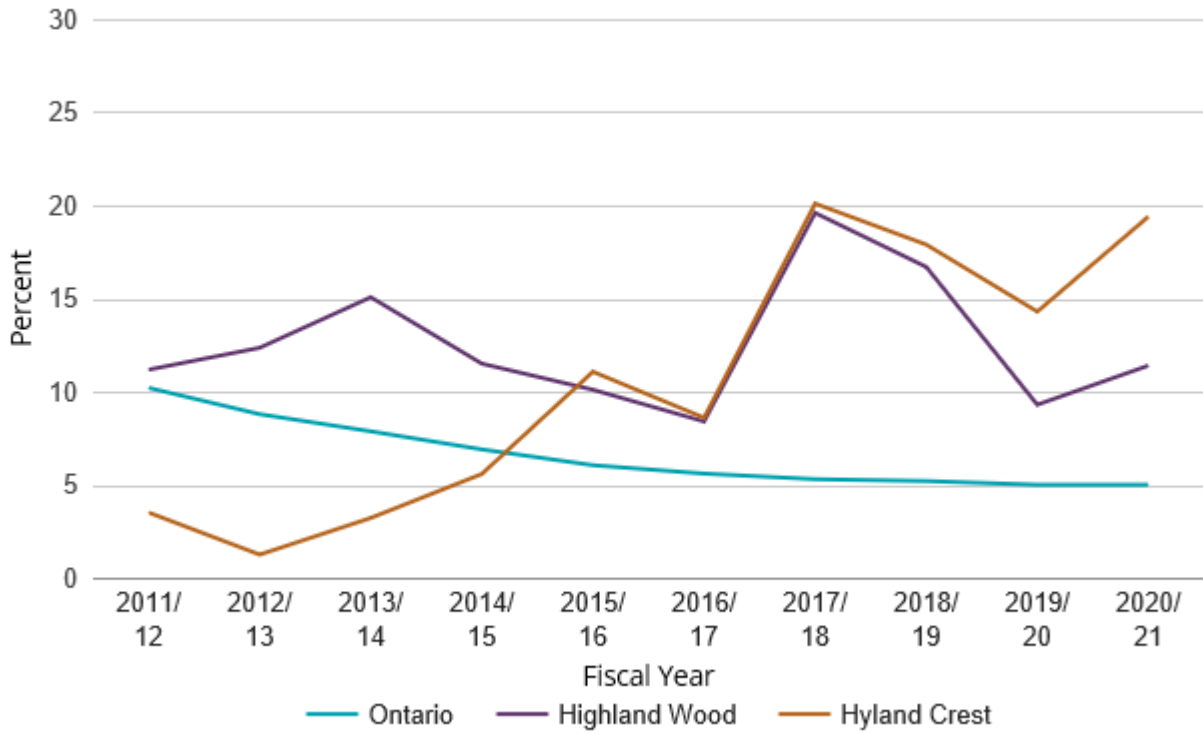

Pressure Ulcers: This indicator shows the % of LTC home residents in Ontario who had a new pressure ulcer (bed sore), or one that worsened, since the previous assessment by a Health care professional. A lower percentage is better. Provincial benchmark is 1%. Pressure ulcers can develop in LTC home residents who lie or sit in one position for too long.

2020/21 Provincial Average: 2.5 HW: 2.2 HC: 6.2

Pain: This indicator measures the %of long-term care home residents who experienced moderate pain daily or any severe pain, in Ontario. Provincial benchmark is not defined. Pain, which can cause sleep problems, depression, agitation or limited mobility, may be under-reported or under-treated.

2020/21 Provincial: 5.0 HW: 11.4 HC: 19.4

Anti-psychotic medications: Percentage of long-term care home residents not living with psychosis who were given antipsychotic medications, in Ontario Antipsychotic medication can help control hallucinations, agitation or aggression caused by dementia. Patient side effects may include confusion, higher risk of falls, and a slightly increased risk of death.

2020/21 Provincial: 19.3 HW: 19.4 HC: 7.9

Worsening Depression: Percentage of long-term care home residents whose symptoms of depression worsened, in Ontario. The benchmark is 13.0 Symptoms of worsened depression such as growing sadness, anger, anxiety or tearfulness, are associated with a functional decline in long-term care home residents, as well as suffering by their families and caregivers.

2020/21 Province: 22 HW: 32.7 HC: 42.3
